

Sixth-order simulation
 $i_a^{(6\text{th})}(t)$

Sample at relay rate
10 kHz, window $\mathcal{W}_L$

Reduced inverse fit
 $\hat{\theta} = \text{TwoPASSLM}(i_a, \mathcal{W}_L)$

Reconstruct $\hat{i}_a^{(\text{red})}(t)$
from $\hat{\theta}$

Compare

Waveform metrics
 $\varepsilon_{\text{RMS}}(L)$,

Identification
 $\kappa_n(J), \gamma(L)$

Parameter bias
 $b_{I_{ss}}(L), b_{\tau_{ac}}(L)$

Relay consequence
 $\Delta I_p^*, \Delta TMS^*, \Delta t_{\text{op}}$
